DESINFECTANT AUTOMATIQUE SUR PIED, SUR TABLE OU AU MUR

Germstar® was established in 2008 to address the increasing demand for safe sanitisation solutions, to improve human health through infection control.

With the growing threat from foreign viruses and germs, Germstar® recognised the solution was to prevent initial contamination; it's more effective to prevent infection rather than remedy it later.

In recent years we have seen the ever increasing rise of outbreaks of Norovirus and E Coli. Germstar® provides protection for everyone in the fight to kill germs transmitted via the hands, which accounts for 80% of transmission. Germstar kills 99.9% of all transient bacteria, viruses and fungus on contact and has been proven to kill:

- H1N1 (Swine Flu)
- Norovirus (winter vomiting bug)
- Gastroenteritis
- E Coli
- Salmonella
- MRSA... and many more.

Germstar® beginnings were from Binderbauer Pharmaceuticals; a company formed in the late nineties to develop, manufacture and market an innovative touchless sanitation system and ancillary products based on technology developed and patented by the Company's founders, Mr. Horst Binderbauer and Dr. Michl Binderbauer.

Germs are unavoidable; they are present on all surfaces we touch, which is why Germstar® are dedicated to catering for multiple industries:

[Germstar® for Domestic](#)

Good hand hygiene at home means your family is less likely to contract common infections such as colds, flu's and stomach bugs.

[Germstar® for Education](#)

Germstar hygiene systems help protect students from nursery age through to university in an environment where illness causing germs are easily spread.

[Germstar® for Healthcare](#)

People who work in hospitals, care homes and doctors surgeries are frequently exposed to germs. It is recommended to wash your hands regularly and apply hand sanitiser to keep up with infection control procedures.

[Germstar® for Leisure](#)

Wellbeing and hygiene at leisure facilities goes hand in hand to give your customers and workforce the required protection in reaching their goals.

[Germstar® for Hospitality](#)

Hotels, restaurants, airlines, and cruise ships are beginning to offer infection control products to protect both customers and staff. Guests and employees alike appreciate the convenience of infection protection where they work and play.

[Germstar® for Industrial](#)

Our unique range of hand hygiene products are available in many different sizes, making it the ideal product for busy service engineers who might not always have access to hand washing facilities.

[Germstar® for Care and Nursing Homes](#)

We help protect care homes everyday with our Germstar dispenser system, our tailored service makes hand washing and sanitising quick and easy and will not damage the skin of the user with frequent use.

Germstar kills 99.9% of all transient bacteria, viruses and fungus on contact.

Our unique infrared touchless dispensing system eliminates cross infection and provides complete hand sanitation.

Germs in the Office

Offices are a hot-spot for germs and bacteria and often aren't cleaned as they should be due to rules and regulations. Therefore it's important that you maintain a hygienic workspace by regularly sanitising your work area.
